

# Momo Net 1

design by Jeremiah Ferrarese

COLOS

MOMO NET 1 is a designer chair made from expanded metal mesh that is e-coated before being painted, making it highly resistant. This makes it an excellent candidate for outdoor use, too, whatever the climate. The holes in the mesh make it particularly ideal outdoors when the temperature climbs. Light in design and weight, the Momo Net 1 chair can be readily used in bars and restaurants, making it quick to shuffle seating around to accommodate the requirements of patrons.

The frame has six colour options and also comes in an armchair version and a tall stool size.

## Jeremiah Ferrarese

A native of Padua, Jeremiah Ferrarese graduated from IUAV, the Venice School of Architecture, in 2006. Since 2005, he has collaborated with Venetian architect Paolo Scagnellato, who sparked his interest in industrial design. In little over a decade, Ferrarese's designs have racked up awards and acclaim, both in Italy and internationally.

"Every project entails hard work, method and respect for history, although it inevitably all starts with a light-bulb moment. Familiarity with the materials and the technique required means the idea can then be turned into tangible, reproducible products."

## Compositions

4-leg chair made of expanded metal mesh welded to a curved tubular aluminium frame, diameter 25 mm, polyester powder coated.

Stackable up to 12 units on the floor.

## Certifications

## Dimensions

## Packaging

- Quantity for package: 4
- Box sizes: **66x61x86cm**
- Package volume: **0,35 m<sup>3</sup>**
- Package weight: **17 Kg**

## Powder-coated metal colours

**Use and maintenance**

**STEEL** — Iron and carbon alloy with carbon percentage lower than 2% treated to resist atmospheric agents.

**MAINTENANCE** — To keep the product in good condition for a long time, we recommend storing it during the winter in closed and dry places in order to avoid condensation. Before the winter season and on a quarterly basis, if the products are stored near the sea, it is recommended to clean the metal surfaces with a soft cloth using water or detergents and protect them with vaseline oil or car wax.

**ALUMINUM** — Aluminum alloys, particularly suitable for cold working and for die casting, treated appropriately to resist atmospheric agents and powder coated.

**MAINTENANCE** — To keep the product in good condition for a long time, we recommend a correct periodic cleaning, particularly frequent in places characterized by high humidity and marine climate. It is recommended to clean the surfaces with a soft cloth using water or neutral detergents. Prolonged and uninterrupted exposure to intense UV radiation or very cold temperatures can affect the initial characteristics of the colored aesthetic coating made of polyester. We recommend cleaning and storing products in sheltered places during prolonged periods of non-use and in winter.

**HPL** — Self-supporting material suitable for exposure to the external environment. It consists of layers of Kraft paper impregnated with phenolic resins and a decorative surface layer impregnated with thermosetting resins. These layers are pressed at 9Mp and at a temperature of 150 degrees centigrade.

**MAINTENANCE** — The HPL laminate is easy to clean and does not require any particular maintenance. Most stains can be washed with water only and dried with soft, clean cloths. For persistent stains, use a sponge and a specific laminate cleaner, or glass cleaner. Then remove the traces of these products with a dry cloth to avoid streaks or opacification. We always recommend trying any product in an inconspicuous corner. Avoid using steel scouring pads, products containing abrasive creams, washing powder and acetone.

**PLASTIC MATERIALS** — Plastic surfaces should generally be cleaned with a damp and soft cloth soaked in water, the use of dry cloths which with rubbing could electrostatically charge the plastic surface attracting dust is not recommended.

For stubborn stains, neutral liquid soap can be diluted in water in moderation. Absolutely avoid the use of acetone, trichlorethylene, ammonia, or detergents that contain even a small amount of these detergents because they can dull the

shine of the surfaces. Absolutely avoid all abrasive substances, such as powder detergents, abrasive pastes, scouring pads or rough sponges. Avoid dragging objects that can scratch the material onto surfaces. Remember also that plastic materials cannot withstand sources of direct heat on the surface, such as direct contact with pots and pans.

**WOOD** — Clean with a damp and soft cloth soaked in warm water. Always dry after cleaning. Immediately remove any liquid substances or other residues to avoid absorption. The wooden surfaces, being the same a natural material, could undergo color changes with use and over time. Remember that woods cannot withstand direct heat sources on the surface. Long-lasting exposure could alter its coloring.

**WARNINGS**

Avoid the following improper uses: stand on the product, sit on the back, on the armrests, on the edge of the tables, use the product as a ladder. Do not disperse the product in the environment, but call the companies responsible for the disposal of solid urban waste for transport to landfills and recovery. The table tops in sheet metal / iron are made with a slight deviation of planarity downwards to prevent a "spring effect" from being created during use.
